LOSE THE STRAPS!

The best option for patients to discretely manage their leg bags and improve their quality of life.

KNOW THE DIFFERENCE +

CathWear completely changes the way patients carry and manage their leg bags and tubing in two specific and revolutionary ways:

① CATH-POCKETS

Patients will no longer be burdened with the task of having drainage bags full of bodily fluids tied to their legs with unsanitary straps, which can put the patient at risk for infection. The **CathWear** two pocket system allows patients to simply place their bags into the secure and spacious Cath-Pockets.

This technology prevents the bag from sliding up and down the leg. The patient no longer has sweat points due to plastic to skin contact, which may increase skin irritation. Over-tightening of the antiquated straps or elastic band is completely removed, which may restrict blood flow and possibly create blood clots and skin rashes.

② CATH-TRACT

Patients will finally be able to eliminate inadvertent pulling and dislodging of the drainage catheter from the organs by utilizing the Cath-Tract system where all of their tubes will be safely concealed and secured. There is also a Velcro opening on the Cath-Tract that will allow the patient to have an access point which eliminates any complications of threading the tubing through the tract. This is a tremendous benefit to patients with loss of dexterity associated with rheumatoid arthritis or osteoarthritis.
